Bootstrap 5 & JavaScript Activity

Mastering Front-End Web Development

This interactive landing page demonstrates how Bootstrap 5, Bootstrap Icons, and SweetAlert2 can be combined to build responsive, component-driven web interfaces as part of a hands-on front-end development lab exercise.

Explore Features View Pricing

Core Features

Everything you need to build a modern web experience.

Responsive Layouts

Build fluid, mobile-first pages that adapt seamlessly across devices using Bootstrap's grid system.

Custom UI Components

Style and extend Bootstrap components to match a unique visual identity without losing consistency.

Interactive JS & SweetAlert2

Enhance user interactions with client-side JavaScript and polished SweetAlert2 notifications.

Testimonials

What students say about this course.

"This lab exercise finally made Bootstrap click for me. The step-by-step structure was easy to follow and fun to build."

Maria Santos

Front-End Web Development 101

"I loved integrating SweetAlert2 with real form validation. It felt like working on an actual client project."

John Dela Cruz

Intro to Responsive Design

"Clear instructions, clean layout, and a great introduction to component-based UI thinking."

Angela Reyes
